## JY-205 vinyl silicone oil

1. **Chemical name** polydimethylsiloxane with vinyl two methyl silicone oxygen radicals sealing side --- vinyl dimethyl terminated polydimethylsiloxane.

2. **Product structured:**

--- CAS No.: 68951-99-5

3. **Product main technical index**

- 1, appearance: colorless transparent or faint yellow liquid.
- 2, viscosity (mpa.S): 50 ~ 50000 (according to need adjustment)
- 3, vinyl content (%): 1 ~ 10 (according to need adjustment)
- 4, volatile copies (150 °C 3h %): less than 2.0

4. **Properties and usage**

**Features:** This product is non-toxic, tasteless, can adjust its terminals vinyl content to get different crosslinking degree products; As the basis of add molding silicone rubber compound; can improve its fluidity and improve tensile of physical mechanical properties.

**Usage:** This product is mainly used as the basis of add molding silicone rubber compound, is also available for preparation organsilicone-modified acrylic resins, latex.

5. **Packing and shipping**

- 1, this product should be stored in a clean airtight plastic buckets and plastic coated iron in acid and other impurities, avoid to contact.
- 2, the product should be stored in a cool, ventilated place, do not explode in the sun drying.
- 3, the products according to the non-dangerous goods and shipping.
